

Coffee: World Markets and Trade

Record Brazilian and World Production Forecast for 2010/11

2010/11 Forecast Overview

Although world carry-in stocks are forecast to be relatively tight in 2010/11, perhaps reflected in the recent price surge, record production is expected to boost trade and replenish ending stocks. Consumption is forecast to expand 2 percent, the average growth rate over the last several years.

Carry-in Stocks

Carry-in stocks are forecast at just 31.3 million bags (60 kilograms), down 5.5 million from the previous year, mainly due to a reduction in Brazil. The top two exporting countries—Brazil and Vietnam hold just 15 percent of total carry-in stocks while Europe, the United States and Japan account over 75 percent. Recently, Brazil and Vietnam implemented policies to support stockpiling in an effort to shift this balance.

Production

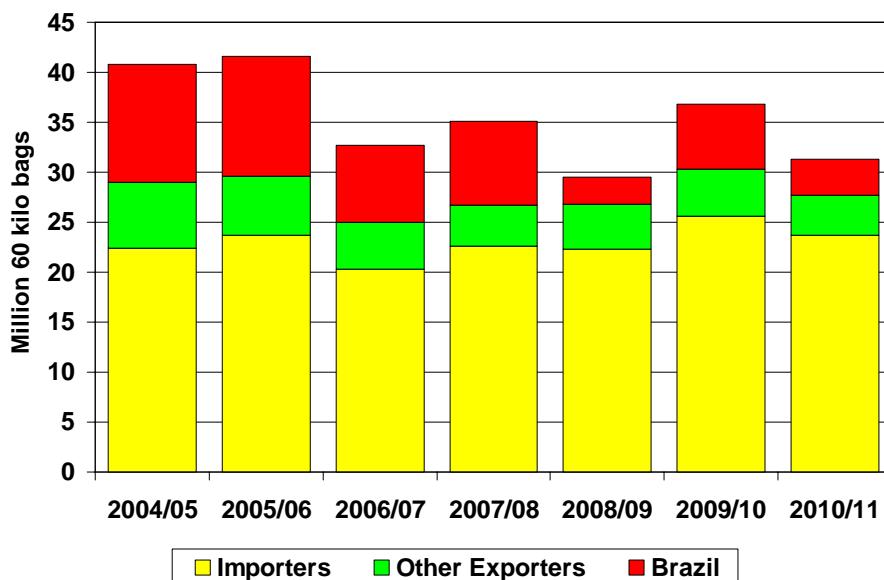

World coffee production for 2010/11 is forecast at a record 139.7 million bags, up 14 million mostly due to Brazil. Over 50 percent of the world's coffee is again expected to be produced by Brazil and Vietnam.

Brazil is forecast to jump 10.5 million bags to a record 55.3 million in 2010/11 (July-June marketing year). Arabica production is forecast to increase 8.8 million bags to 41.8 million due to the on-year of the biennial cycle. Precipitation between July and September 2009 promoted several favorable blooms as well as good fruit setting and cherry development. Because growers conduct only one harvest per year, multiple blooms at various maturity levels might affect the quality of the crop. Robusta production is forecast up 1.7 million bags to 13.5 million due to good crop management and irrigation.

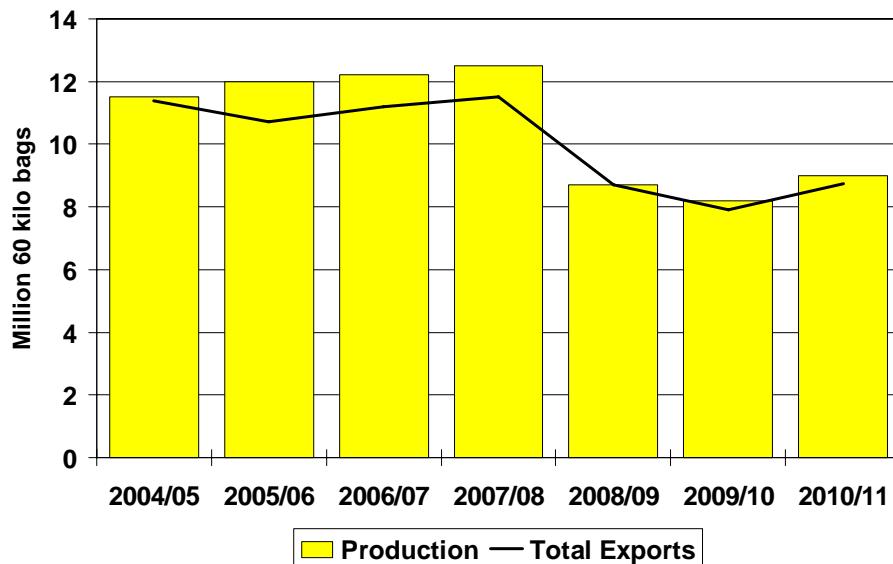

Vietnam experienced reasonable rainfall during blossoming, which was followed by good fruit setting and cherry development. Therefore, production is forecast to rebound 1.2 million bags to 18.7 million in 2010/11 (October-September), marking the fifth straight year where production has ranged between 17.5 and 19.5 million bags. Prior to this, the sector expanded rapidly.

Colombia is forecast to expand 800,000 bags to 9.0 million in 2010/11 (October-September), though several factors are expected to keep the harvest below the five-year average of 11.8 million. High temperatures and dry conditions during most of the main crop's flowering period will likely lower yields. These conditions also discouraged farmers from applying fertilizers, further restraining yields for the main crop. Moderate recovery is forecast for the mitaca crop.

Low Brazilian 2010/11 Carry-in Stocks

Problems Persist in Colombia

Indonesia is forecast up 450,000 bags to 9.6 million in 2010/11 (April-March), making it the third largest producer after Brazil and Vietnam. Continued expansion is possible in the next few years as some farmers begin to convert from cocoa to coffee production in response to a recently announced cocoa export tax.

India is forecast to slip 225,000 bags to 4.6 million in 2010/11 (October-September) as a result of limited rainfall and high temperatures in some growing regions, though most areas received good pre-blossom precipitation.

Mexico is forecast 200,000 bags higher at 4.6 million in 2010/11 (October-September) due to favorable weather and younger trees coming into full bearing. Over the next few years, crop area is expected to expand at a moderate pace.

Consumption

World consumption is forecast at a record 131.5 million bags, up 2.8 million with Brazil and the EU-27 accounting for half the growth. Over the last several years, consumption in producing countries, especially Brazil and Vietnam, has expanded at a faster pace than import markets such as the EU-27 and the United States. The Brazilian Coffee Industry Association has encouraged domestic demand through a strong marketing campaign as well as programs designed to improve product quality. In Vietnam, numerous coffee shops have opened in several urban areas in response to coffee's popularity and availability.

- **Brazil** is forecast 750,000 bags higher to 19.5 million.
- **Vietnam** is forecast up 140,000 bags to 1.2 million.
- **EU-27** is forecast to expand 650,000 bags to 46.3 million.
- **United States** is forecast to add nearly 400,000 bags to 23.7 million.
- **Japan** is forecast 125,000 bags lower to 6.7 million.

Imports

Total Green Bean Equivalent (GBE) imports are forecast at 100.2 million bags, up 4.4 million. Green coffee beans are forecast at 90.9 million bags, soluble at 9.0 million and roasted at 0.3 million.

- **EU-27** is forecast to expand 2.4 million bags to 46.8 million.
- **United States** is forecast to add 1.3 million bags to 23.9 million.
- **Japan** is forecast to edge up 125,000 bags to 6.8 million.
- **Russia** is forecast 250,000 bags higher to 4.1 million (60 percent soluble).

Exports

Total GBE exports are forecast at 103.4 million bags, up 5.1 million. Green coffee beans are forecast at 92.9 million bags, soluble at 10.3 million and roasted at 0.2 million.

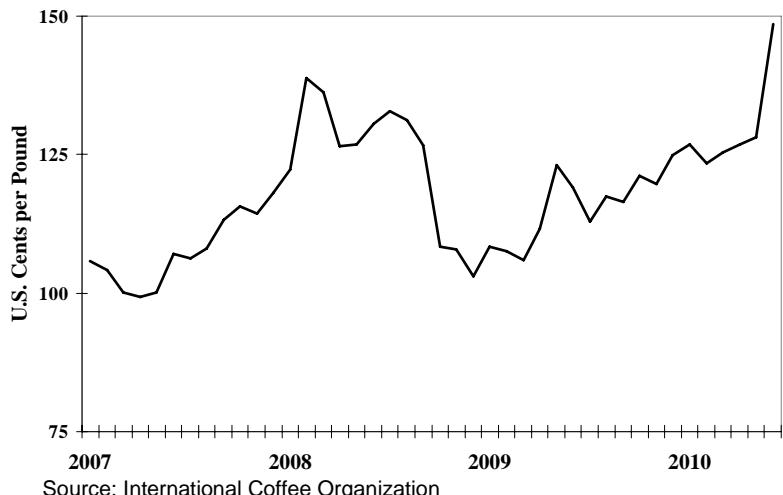

- **Brazil** is forecast at 32 million bags, up 2.9 million on strong EU demand. Green bean exports are likely to account for 28.6 million bags, while soluble exports are forecast at 3.3 million bags.

- **Vietnam** is forecast at 16.8 million bags, unchanged from the previous year. Green bean exports are expected to account for all but 100,000 bags.
- **Colombia** is forecast at 8.8 million, up 900,000 bags as export markets consume nearly the entire crop.

Prices

In response to tight supplies, the International Coffee Organization (ICO) composite price jumped nearly 15 percent in mid-June. The volatility was driven by heavy short covering of the July contract, fund buying and only marginal producer selling.

ICO Composite Price Climbs on Tight Carry-in Supplies

2009/10 Production Estimate Revisions

- World production is revised up 400,000 bags to 125.7 million.
- Brazil is revised up 1.3 million bags to 44.8 million due to stronger Arabica harvest.
- Colombia is lowered 800,000 bags to 8.2 million, as the main crop underperformed and the mitaca crop shows similar weakness.

Notes:

A conversion factor of 2.6 was used to convert soluble coffee to the green bean equivalent.

Coffee marketing year for producer countries begins either in October (Colombia), April (Indonesia) or July (Brazil), as examples.

Coffee marketing year for non-producer countries begins in October.

For the United States, Canada and the EU-27, exports appear as zero in the database and the actual amount has been subtracted from imports to show net imports.
