

Coffee: World Markets and Trade

International Coffee Organization Composite Price, May Average

World coffee production in 2011/12 is forecast to outpace consumption for a second consecutive year, although ending stocks are expected to remain tight. Production is forecast to decline a moderate 2.9 million bags, whereas previous down years have declined as much as 16 million bags. However, stocks are forecast to remain at diminished levels, leaving little cushion should there be a supply problem. In response to the multi-year stocks drawdown, prices have spiked.

Decade in Review

In the last decade, world production has expanded by 23.5 million bags (21 percent), with Brazil and Vietnam accounting for virtually all of the gain. The other 50 producing countries have been mostly flat, with growth in some countries largely being offset by losses in others. For example, Nicaragua, Honduras, Peru and Indonesia experienced growth in excess of 1 million bags during this period, but declines of similar caliber occurred in Cote d'Ivoire and Colombia. Production in just the last few years has fallen in certain countries because of pests, diseases and/or poor weather. Also, output has been affected by tree renovation programs recently implemented in several countries.

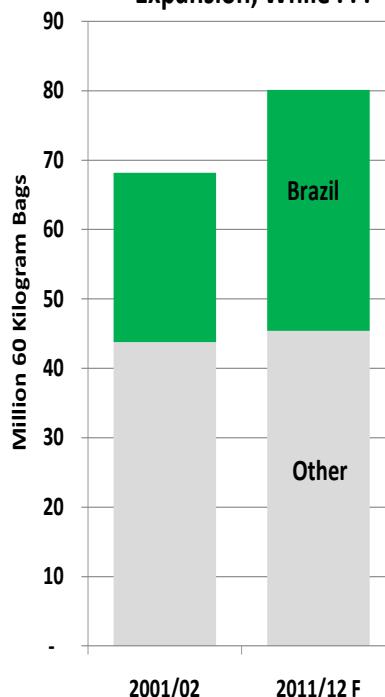

Arabica and Robusta production have increased by nearly equal amounts in the last decade, expanding 11.9 million and 11.6 million bags, respectively. As a result, the ratio has not changed significantly from 60 percent Arabica to 40 percent Robusta. The vast majority of the Arabica growth has come from Brazil, with gains in Honduras, Peru and Nicaragua partially offset by losses in Colombia, India and Costa Rica. Nearly two-thirds of the Robusta gain has been from Vietnam and one-third from Brazil.

Stocks have been cut nearly in half in the last decade and their location has shifted. Initially, top consuming countries were balanced with top producing countries at about 40 percent. The United States, Europe and Japan are forecast to account for 70 percent with Brazil, Vietnam and Colombia holding just 25 percent.

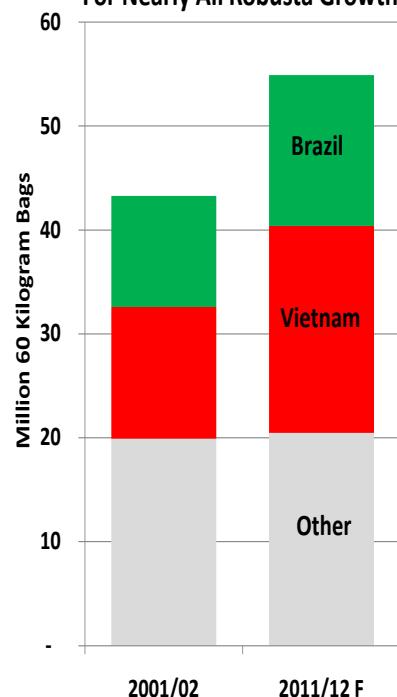

Brazil and Vietnam Lead Production Growth

Brazil Dominates Arabica Expansion, While . . .

Vietnam and Brazil Account For Nearly All Robusta Growth

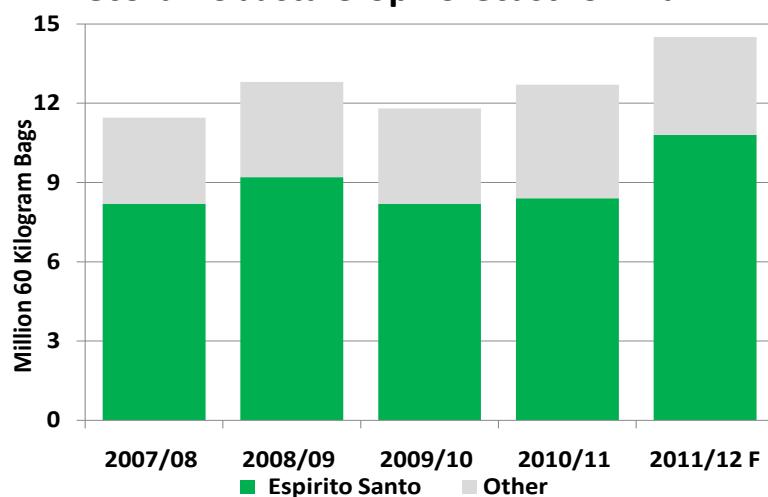

2011/12 Production Forecast

World coffee production for 2011/12 is forecast at 135.0 million bags, down just 2.9 million as Brazil enters the off-year of the biennial Arabica production cycle. Record Robusta crops in Brazil and Vietnam, combined with Colombia's continued recovery, are expected to soften the decline.

Brazil's Robusta harvest is forecast to jump 1.8 million bags to a record 14.5 million as favorable weather conditions and good crop management benefited fruit setting and development in the State of Espirito Santo, where nearly 75 percent is grown. Production during the previous two seasons suffered from weather related problems during the blossoming period, making the year-over-year growth all the more dramatic. The Arabica crop is forecast to drop 7.1 million bags to 34.7 million during the off-year of the biennial cycle, a normal amount as compared to recent periods. Strong blossoming, favorable weather and good crop management supported ideal cherry setting and development. As a result, total production is forecast to fall 5.3 million bags to 49.2 million.

Record Robusta Crop Forecast for Brazil

Vietnam is forecast to rise 1.9 million bags to a record 20.6 million as the rainy season arrived on time, resulting in a good flowering and fruit setting. High prices motivated many growers to irrigate in order to boost yields, while higher incomes encouraged some farmers to begin replacing low-yielding trees.

Colombia is forecast to recover 1 million bags to 10.5 million. High prices combined with government support encouraged many growers to apply more fertilizer, pesticides and fungicides in order to improve yields. However, the crop is still short of the five-year average of 11.8 million produced prior to shortfalls caused by coffee rust and the coffee cherry borer. The ongoing tree renovation program has also cut into yields.

Indonesia is forecast down 1.4 million bags to 7.9 million as higher-than-average rainfall during flowering damaged the bloom in many areas.

India is forecast to slip 300,000 bags to 4.8 million mainly because Robusta areas experienced uneven rainfall during the bloom period, which is expected to lower yields.

Mexico is forecast at 3.7 million bags, unchanged from last year's low production, as dry conditions in certain areas adversely affected the bloom.

For further information, please contact Tony Halstead at 202-720-4620, or send an email to Tony.Halstead@fas.usda.gov

Notes:

A conversion factor of 2.6 was used to convert soluble coffee to the green bean equivalent.

Coffee marketing year for producer countries begins either in October (Colombia), April (Indonesia) or July (Brazil), as examples.

Coffee marketing year for non-producer countries begins in October.

For the United States, Canada and the EU-27, exports appear as zero in the database and the actual amount has been subtracted from imports to show net imports.
