World Agricultural Production

Eastern Brazil Precipitation: April 1 – June 4, 2009

Rainfall Data Source: Centro de Previsão de Tempo e Estudos Climáticos (CPTEC)
<http://clima1.cptec.inpe.br/>

Heavy Rains in Western Bahia Reduces 2008/09 Cotton Output in Brazil

Harvesting of Brazil's 2008/09 cotton crop started last month in Mato Grosso and western Bahia states, which account for approximately 49 and 33 percent of national production, respectively. Early harvest reports from western Bahia indicate open bolls were damaged by heavy rains of approximately 270 millimeters (mm) and 115 mm in April and May, respectively, when monthly averages are normally 95 mm and 25 mm. Conservative estimates place output losses in western Bahia at 10 percent, while some analysts believe 20 percent losses are possible. Crop conditions in Mato Grosso range from good to excellent due to

abundant and well-distributed rainfall. Above-average yields in Mato Grosso should help compensate for output losses in western Bahia.

Brazil's 2008/09 cotton production is forecast at 5.5 million bales, down 5 percent from last month and down 25 percent from last year. Harvested area is forecast at 0.83 million hectares, down 2 percent from last month and down 23 percent from last year. Yield is forecast at 1443 kilograms per hectare, down 3 percent from last month due to excessive rains in April and May. (*For more information, contact Curt Reynolds at 202-690-0134.*)

Zimbabwe's 2008/09 Corn Output Better than Last Year Due to Favorable Weather

Zimbabwe's 2008/09 corn production is estimated at 650,000 tons, up 250,000 tons from last month and up 125,000 tons from last year. The 2008/09 yields are expected to be greater than last year due to favorable weather, with last year's yield estimated at 0.40 tons/hectare and 2008/09 yield estimated at 0.59 tons/hectare. Corn area for 2008/09 is estimated at 1.1 million hectares, up 0.2 million from last month but down 0.2 million from last year's 1.3 million hectares.

Zimbabwe's 2008/09 corn area was extensively evaluated with satellite imagery by USDA's Foreign Agricultural Service (FAS) to determine if the corn area trend has increased or decreased after the Zimbabwe fast track land reform program was announced in July, 2000. The satellite imagery analysis revealed that 2008/09 corn area decreased by approximately 30 percent nationwide from the 1999/00 growing season. A 30 percent reduction in corn area (when 1999/2000 corn area totaled 1.47 million hectares) implies that 2008/09 corn area ranges from 0.9 to 1.1 million hectares. In contrast, the Zimbabwe government currently estimates 2008/09 corn area at 1.52 million hectares, despite seed and fertilizer production operating at 15 to 20 percent capacity compared to 2000. (*For more information, contact Curt Reynolds at 202-690-0134.*)

Afghanistan Wheat Production Rebounds

The USDA currently forecasts Afghanistan's 2009/10 wheat crop at 3.4 million tons, up 1.9 million or 127 percent from last year. Afghanistan suffered a severe drought last year which decimated its 2008/09 winter grain crop and caused an acute food and feed-grain shortage throughout much of the country. USDA estimates 2008/09 wheat production to have fallen 55 percent from 2007/08. This major production shortfall of the nation's staple grain crop was exacerbated by disruptions in regional grain trade (export bans) and increasing conflict in major transport corridors along the Pakistani border, resulting in record high domestic food grain prices and increasing food insecurity. With a seriously diminished supply of wheat in the country, officials have been particularly concerned about the outlook for the 2009/10 wheat crop. This crop was sown in the autumn of 2008 and will be harvested from May through August 2009. Overall seasonal conditions have been near ideal this year, with spring rainfall substantially above normal. The rain boosted crop development throughout Afghanistan's vast northern grain belt, likely ensuring a healthy recovery in grain production. Satellite imagery indicates that the wheat crop is in excellent condition and that production is expected to reach near-record levels.

The sharp rebound in wheat production should help alleviate existing regional grain shortages, assist the government in building emergency stocks, help reduce imports to more normal levels, and cause a significant decline in persistently high food grain prices in the country. (*For more information, contact Michael Shean at 202-720-7366.*)

Argentine Barley Planting to Lessen

Barley harvested area in Argentina during 2009/10 is expected to drop down to 0.45 million hectares as compared to the 0.48 million hectares in 2008/09 due to less demand for contracts from key buyers. Production may drop to 1.6 million tons with less ground planted, down to the same production as the drought-ridden 2008/09 year. Private sources estimate that 70,000 tons of off-contract barley from earlier harvests is still available in silo bags on farmer fields. Limited subsoil moisture despite recent rain during the current fall season around the province of Buenos Aires, is limiting planting of barley as well as other small grains. Over 76 percent of the barley in Argentina is produced in Buenos Aires province. (*For more information, contact Dr. Denise McWilliams, at 202-720-0107.*)

Argentine 2008/09 Soybeans Suffer Reduced Yield in Second Crop

The USDA forecasts Argentine soybean production for 2008/09 at 32.0 million tons, down 2.0 million tons or 6 percent from last month's 34.0 million. Area is estimated at 16.0 million hectares, down 0.5 million or 3 percent decrease from last month. Forecast yield is down slightly from last month at 2.00 tons per hectare, compared to the 5-year average of 2.70 tons per hectare and the record of 2.99 tons per hectare in 2006/07.

Persistent drought and high temperatures have plagued much of the soybean crop from planting through harvest. Local accounts indicate additional area losses as well as low yields on second-crop soybeans. Harvest is nearly complete, with only two percent of the crop remaining to be gathered. (*For more information, contact Dr. Denise McWilliams, at 202-720-0107.*)

Argentine 2008/09 Sunflowers Boosted by Better-than-Expected Hybrid Yields

Argentine sunflower production for 2008/09 is forecast at 2.9 million tons, up 0.4 million or 16 percent from last month's 2.5 million tons. Yield is forecast at 1.71 tons per hectare, a 16 percent increase over last month. Area is estimated at 1.7 million hectares, unchanged from last month. Slight but timely rains during December, January and February aided the early-planted sunflowers and contributed to better-than-expected yields. With ongoing dry conditions, sunflower production is expected to be just higher than the low harvests of 1986/87 and 1987/88, when production was only 2.5 and 2.8 million tons. (*For more information, contact Dr. Denise McWilliams, at 202-720-0107.*)

Brazil's 2008/09 Rice Yields and Output Set New Records

Brazil's 2008/09 rice production is forecast at 13 million tons on a rough basis, up 0.5 million tons or 4 percent from last month and up 8 percent from last year. Harvested area is forecast at 2.92 million hectares, up 20,000 hectares from last month and up 46,000 hectares from last year. Yield is forecast at a record of 4.45 tons per hectare, up 3 percent from last month and up 6 percent last year's yield.

Harvest is complete in Rio Grande do Sol which produced approximately 62 percent of the nation's 2008/09 rice output, or a record of nearly 8 million tons for the state. Rice yields for the state also set a record this year with yields slightly greater than 7 tons per hectare. Rice yields have been increasing in Rio Grande do Sol for the past several years due to improved rice varieties and improved farming practices and management. (*For more information, contact Curt Reynolds at 202-690-0134.*)

2009 Canadian Wheat and Barley Production Forecast to drop 13 percent

The USDA forecasts 2009/10 Canadian wheat production at 25 million metric tons, down 3.6 million or 13 percent from last year. Barley production is forecast at 10 million metric tons, down nearly 15 percent from last year and down 7 percent from last month. The reductions are a result of a regional drought impacting the Canadian prairies. Central Alberta and Western Saskatchewan provinces have not received adequate rainfall since the 2008 harvest. This area comprises approximately one quarter of Canada's total wheat production. Despite the dryness, the Canadian provincial governments have reported that approximately 95 percent of the barley and wheat crops were sown as of June 1. Crops in central Alberta and western Saskatchewan received light but timely rainfall in some locations June 3-5. Temperatures, however, plunged to near-freezing levels which will delay germination. Currently, planting is 7 to 10 days behind schedule across the Canadian prairies. Barley has a shorter growing cycle than other crops. Thus, farmers have an opportunity to replant any damaged crops. (*For more information, contact Arnella Trent 202-720-0881.*)

China 2009/10 Soybeans: Farmers Worried About Dry Weather

China's 2009/10 soybean production is estimated at 15.6 million tons, unchanged from last month but down 0.4 million or 2.5 percent from last year. Soybean area is estimated at 9.1 million hectares, unchanged from last month but down 0.4 million from last year. Area dropped in 2009/10 in response to poor profits and stronger government support for other crops. The estimated yield of 1.71 tons per hectare is slightly higher than last year and equal to the 5-year average.

Heilongjiang province accounts for about 40 percent of China's total soybean output. Soil moisture was suitable for soybean planting (which began in April), but unseasonably hot and dry in May creating drought conditions over more than 45 percent of Heilongjiang's sown area. According to local reports, emergence was poor in many areas and farmers in the worst-hit areas were forced to replant. Light showers in recent days helped ease the drought in central Heilongjiang but more rain would be helpful. USDA personnel are currently conducting a crop

assessment tour in Heilongjiang and other provinces in Northeast China. In eastern China, the weather was generally favorable for planting and emergence. Excessive rainfall was reported in parts of central and southern China during May and early June, but the impact on soybeans was likely insignificant. (*For more information, contact Paulette Sandene at 202-690-0133*).

Dryness in Central and Eastern Europe Lowers EU Wheat

European Union (EU-27) wheat production for 2009/10 is estimated at 136.0 million tons, down 2.3 million or 1.7 percent from last month and down 15.6 million or 10 percent from last year. Harvested area is estimated at 25.9 million hectares, up 0.05 million hectares from last month but down 1.1 million or 4 percent from last year. Yield is estimated at 5.26 tons per hectare (t/ha) against last month's 5.36 t/ha, and last year's near-record 5.63 t/ha.

Central and eastern Europe experienced extensive dryness during April and May, lowering soil moisture levels and reducing yield potential. Poland, Hungary, Romania, and eastern Bulgaria were especially affected. Romania's notoriously variable output was reduced 1.4 million tons to 6.0 million, but remained above the five-year average of 5.5 million. Hungary received almost no rainfall during the critical growth months of April and May. Widespread showers finally arrived in late May, saving the crop from disaster. Hungary's forecasted crop was lowered 1.0 million from last month to 4.0 million tons. Poland, the largest wheat producer in Eastern Europe also suffered from late-spring dryness, resulting in a 0.4-million-ton reduction to a forecasted 8.7 million tons.

France and Germany, the largest grain producing countries in Western Europe, continue making favorable progress with France's wheat crop raised 0.8 million tons because of favorable rainfall. Spain, where the EU's first harvesting operations have started, experienced a dramatic decrease in its grain crop this year. Last autumn's commodity and input prices discouraged farmers from planting on marginal lands, utilized during the previous campaign. In addition, little rain fell during the critical flowering stage in its grain belt region, the central-west province of Castilla Y Leon. (*For more information, contact Bryan Purcell at 202-690-0138*.)

Morocco: Record Wheat Crop, Barley Just Shy of Record

Harvesting should now be nearly complete in Morocco and recent reports indicate an even larger than expected crop. Morocco is Northwest Africa's largest wheat and barley producer, accounting for about 60 percent of the region's total output. Estimated 2009/10 grain production in Morocco was increased by 0.6 million tons from last month for a combined wheat and barley harvest of 10.2 million tons. Autumn precipitation was early and above average. Abundant rainfall continued to benefit the crop throughout winter and into early spring. After replenishing soil moisture reserves, the rainfall stopped in April which favored harvesting and other field activities. Morocco's 2009/10 wheat production is estimated at 6.5 million tons against 6.2 million tons last month, 3.7 million in 2008/09, and 1.6 million from the drought-afflicted 2007/08 season. The 2009/10 barley crop is estimated at 3.7 million tons, up 0.3 million from last month. This compares to barley production of 1.3 million tons in 2008/09, and 0.8 million in

2007/08. The 2009/10 wheat crop narrowly surpassed the record crop of 2006/07, and barley output is estimated at near-record levels.

Ukraine: Dryness in Central and Eastern Regions Reduces Wheat Prospects

Ukraine wheat production for 2009/10 is forecast at 18.0 million tons, down 7.9 million or 31 percent from last year and down 1.0 million or 5 percent from last month. Harvested area is estimated at 6.6 million hectares, down 0.5 million or 6 percent from last year and unchanged from last month. Yield is forecast at 2.73 tons per hectare (t/ha), against 2.88 t/ha last month and last year's outstanding 3.67 t/ha. Winter wheat accounts for approximately 95 percent of total wheat production in Ukraine.

The month-to-month reduction in forecast yield is attributed to severe spring dryness. Analysis of satellite-derived vegetative indices indicates below-average yields for 2009/10 wheat in most of the country's major wheat producing regions, especially in eastern Ukraine. Although the 2008-09 winter was generally mild and winter crops resumed vegetative growth in good condition, April was excessively dry throughout Ukraine. South-central Ukraine received beneficial rainfall in May, but subsurface soil moisture reserves remain relatively low in western, central, and eastern Ukraine.

Tight credit and other financial difficulties likely reduced application of fertilizer and plant-protection chemicals on both winter and spring crops. Weather, however, will remain the main yield determinant. (*For more information, contact Mark Lindeman at 202-690-0143.*)

This report uses information from the Foreign Agricultural Service's (FAS) global network of agricultural attachés and counselors, official statistics of foreign governments and other foreign source materials, and the analysis of economic data and satellite imagery. Estimates of foreign area, yield, and production are from the International Production Assessment Division, FAS, and are reviewed by USDA's Inter-Agency Commodity Estimates Committee. Estimates of U.S. area, yield, and production are from USDA's National Agricultural Statistics Service. Numbers within the report may not add to totals because of rounding. This report reflects official USDA estimates released in the World Agricultural Supply and Demand Estimates (WASDE-467) June 10, 2009.

Printed copies are available from the National Technical Information Service. Download an order form at http://www.ntis.gov/products/specialty/usda/fas_a-g.asp, or call NTIS at 1-800-363-2068.

The FAS International Production Assessment Branch prepared this report. The next issue of World Agricultural Production will be released after 9:30 a.m. Eastern Time, July 10, 2009.

TABLE 18

The table below presents a 27-year record of the differences between the June projection and the final estimate. Using world wheat production as an example, changes between the June projection and the final estimate have averaged 15.0 million tons (2.7percent) and ranged from -32.2 to 29.6 million tons. The June projection has been below the final 17 times and above the final 11 times.

RELIABILITY OF PRODUCTION PROJECTIONS

COMMODITY AND REGION	PROJECTION AND FINAL ESTIMATES, 1981/82 - 2007/08 1/

1/ The final estimate for 1981/82-2007/08 is defined as the first November estimate following the marketing year.

2/ May not total 27 if projection was the same as the final.

3/ Includes corn, sorghum, barley, oats, rye, millet, and mixed grain.
